Decline of Aircraft Operations at FCTs slows to 1.8 percent in CY 2010

Data from the FAA's Air Traffic Activity Data System (ATADS) indicates that aircraft operations among the 246 federal contract tower (FCT) locations dropped only 1.8 percent overall between CY 2009-2010. The decline is much less than the previous period, CY 2008-2009 where traffic decreased 8.9 percent. The accompanying tables present comparative data for airports in the Federal Contract Tower Program.

For many airports, local operations (aircraft staying in the local traffic pattern) represented the largest decline among the various operations classifications, averaging 4.8 percent less than 2009. In 2010, Contract Towers handled nearly 14 million operations, 27 percent of all aircraft operations at airports with air traffic control towers.

Phoenix/Williams Gateway Airport (IWA) replaced Chandler Municipal Airport as the busiest FCT in the program with 177,874 total annual operations. Two new air traffic control tower facilities were opened and added to the FCT program in 2010. Ocala International (FL) Airport (OCF)* opened in May 2010. Almost simultaneously, Northwest Florida Beaches International Airport (ECP) opened as a replacement airport for Panama City International Airport (PFN).

* *Quadrex client*

About Quadrex

Quadrex Aviation, LLC provides comprehensive professional planning and development services for airports participating or interested in the FAA's federal contract tower program.

Services include:

- FAA Benefit/Cost analyses for establishment and cost-sharing scenarios
- Development funding strategies
- Preliminary site selection
- ATCT visibility shadow studies
- FAA Obstruction Evaluation (Form 7460-1)
- FCC Frequency Coordination (Form 601)
